

Telecom Software Engineers

Job description

You will play a key role in the development and management of fonYou's mobile telecom systems (OSS and BSS) at the company's headquarters in Barcelona. fonYou will build a next generation, software-driven telecom platform and expects you to contribute to the achievement of the following overall goals:

- Engineering an extremely reliable and scalable telecom systems platform
- Setting up an open, standards-based software architecture
- Achieving an optimum buy-versus-build balance

Responsibilities

- Participation in the definition of the technology strategy and in technical planning processes
- Preparation of technical requirements documents
- Management and coordination of different technology vendors and service providers
- Participation in internal and external project committees

Candidate profile

- University degree in computer science/telecommunications engineering
- Hands-on experience in telecom software systems integration and operations
- Good knowledge on the most relevant telecom OSS and BSS products and vendors for mobile operators and MVNOs
- Broad background and experience in modern software technologies and standards
- Self-driven, innovative, pragmatic, team player
- Excellent English and Spanish skills (written and oral)
- Candidates should have at least 5 and 2 years experience for senior and junior positions, respectively

Why join fonYou Telecom?

- Unique opportunity to participate in a start-up telecom operator with a state-of-the-art systems platform
- Opportunity to grow professionally in a success-oriented work environment
- Attractive compensation package (fixed + bonus + benefits)

Mobile Telephony in the Internet Era
